

# ANIMAL COMMUNICATION

## LEVEL 3 COURSE

### Course description

Animal communication is a natural ability that we all have. Through rediscovering ourselves and learning to understand animals we learn to connect and hear them in a totally new way. By communicating with animals in this way we can learn about their health, emotional and environmental problems. The way in which the animal's caretaker plays a role in the animal's life can have a huge impact on both the animals' physical and psychological welfare. By working jointly with the owner at the request of their animal we can help to find a happy medium allowing the relationship to become closer and happier. Throughout the course you will learn how to talk and connect with animals and learn how to use the information that they have given you in order to help them. Animals can feel very much that they are living in our world where they are unable to communicate their wants and needs. By understanding them in this way we can learn to understand the cause of unwanted behaviour, health problems and other issues from their perspective

### Syllabus

#### What is animal communication?
