

EXOTIC ANIMAL CARE COURSE

Course description

This course provides students with a thorough and comprehensive learning experience. This course focuses completely on Exotic Animal Care and Husbandry. This course covers behaviour, habitat, husbandry and diet for each species, recognising that the majority of medical problems in keeping exotics are due to a lack of species-specific information. Common diseases for each species are discussed at length, from the perspective of providing nursing care, and recognising signs of health problems. This course also covers essential information for anyone working with exotics in a clinical setting including: injection sites, administration of medication, anaesthesia, restraint and handling.
